

IN THE ABSTRACT OF THE DISCLOSURE:

Please replace the Abstract of the Disclosure with the following amended abstract, a clean copy of which is appended to the end of this Amendment:

ABSTRACT OF THE DISCLOSURE

~~The present application relates to a A method of making a~~ glass panel that is partially printed with a plurality of layers in the form of a print pattern which subdivides the panel into a plurality of discrete printed areas and/or a plurality of discrete unprinted areas, ~~said the~~ layers being in substantially exact registration. ~~The substantially exact~~ Exact registration is achieved by the application of a plurality of superimposed layers to a sheet of glass ~~of a plurality of superimposed layers. One layer contains, one of the layers containing a ceramic ink comprising glass frit, in a print pattern. The glass sheet and layers sheet of glass and plurality of layers applied thereto are subjected to a heat treatment process which causes the glass frit to fuse to the glass and bind at least one other layer of ink within the print pattern. Any ink not within Ink outside~~ the print pattern is burnt off and/or vaporised during the heat treatment process ~~process~~ and/or removed by a subsequent finishing process, to leave the desired layers in substantially exact registration within the print pattern.
